PRINCIPAL INVESTMENT STRATEGIES

The Fund employs an indexing investment approach designed to track the performance of the CRSP US Total Market Index.

PRINCIPAL RISKS

1. Stock Market Risk - Stock prices overall may decline. Markets move in cycles of rising and falling prices.
2. Investment Style Risk - Returns from the U.S. total stock market may trail other asset classes.
3. Index Sampling Risk - The selected securities may not match Index performance exactly.
4. Securities Lending Risk - The Fund may lend portfolio securities; borrowers may not return them on time.
5. Concentration Risk - Large weightings in any sector (e.g., information technology) can amplify volatility.
6. Small- and Mid-Cap Risk - Smaller companies' stocks may be more volatile and less liquid than large-caps.
7. ETF Trading Risk (ETF Shares only) - Market price may differ from NAV; trading may be halted by circuit breakers.
8. Authorized Participant Concentration Risk (ETF Shares only) - Only Authorized Participants may engage in creation/redemption.
